## **SafeBase™ - How to support and secure your Chip & Pin Devices!**

SafeBase™ is the solution to a very real problem threatening all retailers!

Organised criminals are stealing Chip & PIN payment devices in order to obtain card data and use this information to replicate cards. This can cause you the retailer both inconvenience of replacing a stolen or damaged PED (Pin Entry Device) as well as the risk of customer confidence loss!

The SafeBase™ provides a secure yet practical mounting for PED devices, preventing the theft and reintroduction of “rogue units” into a retailer’s estate in order to gather the cards details. It also helps to prevent wear and tear and limits ‘tamper protect alerts’ due to ‘cable pulls’.

The SafeBase™ is future proofed for changes to your PED devices, with only a small part needing to be upgraded...the main base stays the same. Also it upgradable to include a “contactless payment” module, ensuring your stores can use the latest payment technologies!

The pricing is very competitive when compared to other PED mounting poles that provide no security measures whatsoever.

Compatible with SpacePole™ and designed to optimise counter space, the SafeBase™ provides the ideal security and support for PED devices.

For further information call Mind Your Retail FREE on 0800 99 2177 or visit [www.mindyourretail.co.uk](http://www.mindyourretail.co.uk)
